

# Software Recognition Service

Decipher your data to build a meaningful software list, helping you to remain compliant, optimize spend and minimize costs.

Does your inventory data tell the truth, the whole truth and nothing but the truth for all software installed across your estate?

In order to make the most of the vast data held in your SAM tool you need to filter out the noise and turn it into useable information.

Only then can you fully optimize your software usage, ensure compliance and minimize future spend.

The challenge for SAM managers is making sense of the lists of raw file data gathered from multiple inventory tools, gaining a single version of the truth for what is installed across your estate and critically whether it is licensable or not.

License Dashboard's Software Recognition Service frees up your time and resources for business critical tasks

• **Save time investigating and reconciling raw data**

Software is categorized by our global team of License Dashboard data analysts with unrecognized files/applications matched, normalized and classified by our experts.

• **Ensure correct inventory results**

All files are matched within License

Dashboard's recognition database with License Dashboard analysts focusing on the missing and unmatched signatures, using our cognitive in house data normalization and recognition systems that update our master dictionaries daily with new applications.

• **Work with any inventory tool**

The License Dashboard Software Recognition Service can cleanse and normalize audit data from all inventory solutions, including our own Dashboard Discovery.

• **Vastly increase the percentage of your recognised estate**

A large proportion of unmatched executable data could be worthless legacy software, system files or in-house applications. Filtering out this background noise from your licensable estate will boost your overall discovered percentage within your SAM tool.

License Dashboard API

Do you have other systems that might benefit from this cleansed and normalized data? Contact us now to find out how this and all the other information held within License Manager can be readily accessed via our API.

## Key Benefits

Save time investigating and reconciling raw data

Ensure correct inventory results

Automatically recognize installed software

Free up time and resources for business critical tasks
