

# License Manager: audit connectors

We understand that replacing or duplicating existing inventory and discovery solutions is challenging and time-consuming, so our range of out-of-the-box connectors integrate your existing audit solution into License Manager. There's no faster way to start managing your software licenses.

### License Manager audit tool connectors support:

- Multiple concurrent data feeds from several tools
- Out-of-the-box functionality with no configuration
- Collection of software install and hardware configuration data
- Import of both EXT and MSI data to identify both install products and suites.
